Mitosis is nuclear division plus cytokinesis, and produces two identical daughter cells during prophase, prometaphase, metaphase, anaphase, and telophase. Interphase is often included in discussions of mitosis, but interphase is technically not part of mitosis, but rather encompasses stages G1, S, and G2 of the cell cycle.

Cell division occurs rapidly in living organisms. For example, in an adult human, millions of cells divide each second to maintain proper cell balance. A neat way to remember the steps of Mitosis is = IPMAT----> Interphase, Prophase, Metaphase, Anaphase and Telophase.

Mitosis (aka Cell Division!) | Create WebQuest

Growth in an organism is carefully controlled by regulating the cell cycle. In plants, the roots continue to grow as they search for water and nutrients. These regions of growth are good for studying the cell cycle because at any given time, you can find cells that are undergoing mitosis.
