The gravity and magnetic methods are often referred to as potential methods. Furthermore, the gravitational and magnetic fields that we measure are referred to as potential fields.

Similarities between gravity and magnetism

•Geophysical exploration techniques that employ both gravity and magnetism are passive. By this, we simply mean that when using these two methods we measure a naturally occurring field of the earth: either the earth's gravitational or magnetic fields. Collectively, the gravity and magnetism methods are often referred to as

Geophysical Surveying Using Magnetism Methods Introduction

This is the crux of the magnetohydrodynamic theory of the geomagnetic field (see also Earth: Sources of the steady magnetic field). Gravity methods. The gravity field of the Earth can be measured by timing the free fall of an object in a vacuum, by measuring the period of a pendulum, or in various other ways.
