## **Recycle Ready, Max and Ruby Video Clip**

Once the ink is out, the pulp is beaten to make the recycled fibers swell, this makes them ideal for paper-making. If the recycled pulp is intended to be made into white paper, it is then bleached with hydrogen peroxide, chlorine dioxide, or oxygen to brighten and whiten. For brown recycled paper that step is skipped.

## **How is Paper Recycled?**

The recycling of paper is the process by which waste paper is turned into new paper products. It has a number of important benefits: It saves waste paper from occupying homes of people and producing methane as it breaks down. Because paper fibre contains carbon (originally absorbed by the tree from which it was produced), recycling keeps the carbon locked up for longer and out of the atmosphere.
