I am needing to run sound for a 5 piece classic rock band for a festival this summer. It is an outdoor event on a raised stage (3 ft). I need some setup advice on how to setup my complete live sound system. I have a Behringer PMP6000 analog mixer. 20

channels. A 12 channel snake. I have a QSC 2 channel amp (1,000 watts x 2).

### Live Sound 101: Sound System Design and Setup for a Live ...

Occasionally, more than 2 subwoofers are required for a gig, in which case, you'll need to use a speaker management system. These usually include lots of DSP (digital signal processors) like EQ, compression, limiting and stereo imaging: but most importantly, they allow you to split a stereo signal to eight or more outputs, which gives you the freedom to include multiple subs.

### The Complete Guide to the Basics of Live Sound — Pro Audio ...

Mixing live sound isn't easy, but once you get the hang of it, you'll be doing fine. It's really a lot more than just riding faders

and setting gain, though; don't be afraid to really dig into the more technical concepts like compression and EQ.

### The Basics of Live Sound: Mixing for Beginners

Here are the speakers we need to set up: (2) CQ-1 (wide coverage main), (2) 650-P (2x 18-inch sub) in an uncoupled symmetrical point destination array. It's your standard left/right mains situation (see diagram below). This is the most common professional sound system setup that I run into; it is not good or bad, just common.

The cables used to connect components of a sound system have three wires (conductors), similar to the three prong plug used to supply power to grounded electrical equipment. The electrical circuit used to pass a signal between sound equipment is 'balanced'. This means that two of the three conductors are dedicated to carrying the 'hot' and 'cold' path for the circuit carrying the ...
